

PHARMAFIX II SEPTA

DESIGNED FOR ALL HEADSPACE APPLICATIONS.

Introducing ILT's new and innovative **Pharma-Fix II™ septa**, designed for all headspace applications with a silicone liner fully faced with PTFE.

FEATURES:

Full PTFE facing across the entire septa

Fully molded liner for conformity

Full PTFE face prevents liner material from coming in contact with sample

Low-bleed material for reduced extractables

Available in 13mm and 20mm

The Pharma-Fix II septa combines the tried and true design of the original Pharma-Fix septa and makes it better; by fully coating the face of the septa with PTFE - even in the grooves. The PTFE is molded onto the septa during manufacturing, which provides a complete PTFE layer across the entire liner.

Part

013-03-6001

013-02-6100

020-03-6002

020-02-6135
